

NLP -

(preprocessing step of NLP pipeline)

* parts of speech tagging (pos tagging in NLP)

→ in simple words, pos tagging is a task of labelling each word in a sentence with its appropriate part of speech. In traditional grammar, a part of speech is a category of words that have similar grammatical properties.

→ { Noun pronoun Adjective } ⇒ checking for particular POS in sentence.

⇒ Applications

1) Named entity Recognition (entity extraction from sentences)

EX - I would like to PVR Cinemas.

entity

EX - 2. Rahul will go to Delhi
at 30th march.
entity.

2) Question Answering System.

3) word sense disambiguation

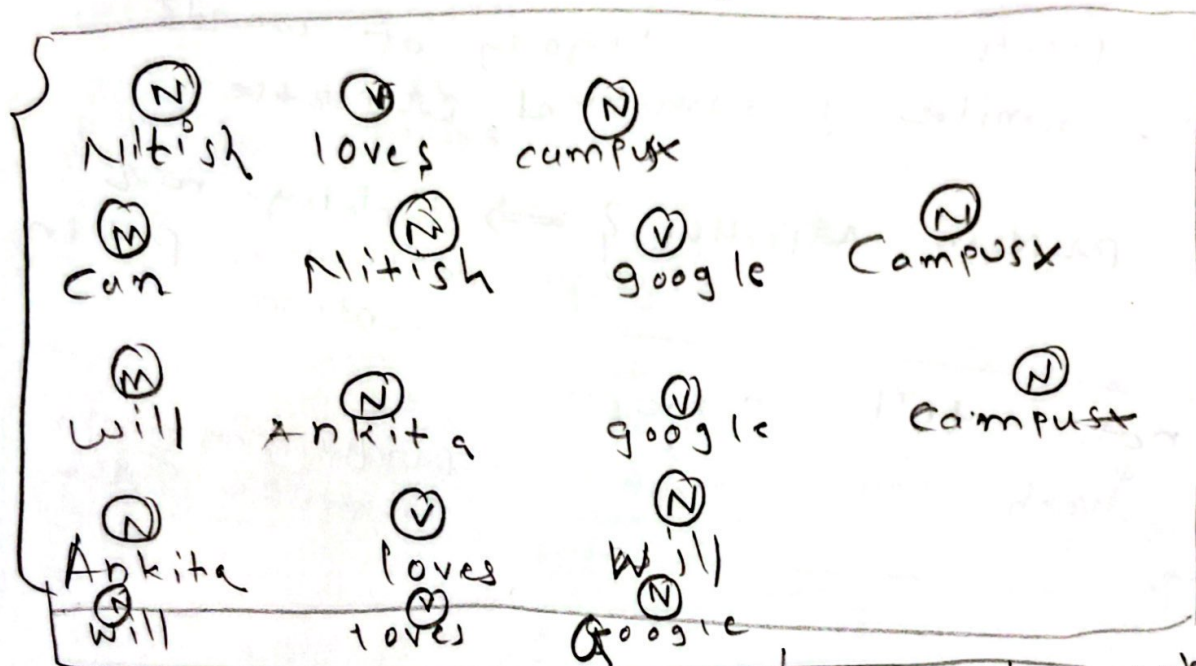

EX I left the room
left of the room

words or word with meaning
words or sentence in use they to decoding

4) chat bots

5) or Any complex NLP systems.

→ How POS Tagging works
[Will will google campus]

Emission
Prob.
Table

unique words	Noun	Model	Verb
Nitish	2/10	0	0
loves	0	0	3/5
campus	3/10	0	0
google	1/10	0	2/5
Will	2/10	1/20	0
Ankita	2/10	0	0
Can	0	1/2	0
Total	10	2	5

probability of
'Nitish' word as
Noun

probability
of 'loves'
words
as verb

probability
of 'Will' word
as Model

This all
probability
called Emission
probability

Transition probability

②

S (N) (V) (N) E
Nitish loves campus

S (M) (N) (V) (N) E
can Nitish google campus

S (M) (N) (V) (N) E
will Ankita google campus

S (N) (V) (N) E
Ankita loves will

S (M) (V) (N) E
will loves google

	N	M	V	E	total
S	3/5	2/5	0	0	5
N	0	0	5/10	5/10	10
M	2/2	0	0	0	2
V	5/5	0	0	0	5

transition probability.

if Any 0 Whole 0

Note: this will have $3^4 = 81$ combinations
 Since Model, Verb, Noun = 3
 and Number of words in sentence = 4

⇒ This whole combination will be healthy in end cause when you have more than 3 pos and more words in sentence

To solve that problem ⇒

Viterbi
Algorithm

Viterbi Algorithm

- (if a don't go for that node)
- multiply every transition & emission probability
- if you get two paths then choose path, which has highest probability.

for this we get two paths

- $S-N-N = 3/500$
- $S-M-N = 1/25$

we will choose this path and remove other path since it has highest probability.
